

THE SCALPEL

(THE HARD SURFACE PENETRATING TOOL)

The SCALPEL is designed by ABP Coaching Aids for the purpose to make a incision through a hard grass surface for the targets stabilizing pin to be inserted into for the stabilization of the target.

The angle of the handle and blade are square to each other for the alignment of the incision to be made to the direction of the target to be placed.

By gripping the handle and applying pressure downwards to the full length to the depth control plate the incision will occur.

If the surface is very hard for the incision, slightly force the Scalpel side to side for the penetration.

Be aware of any disturbance or damage to the playing surface which can be overcome by gently rubbing over with sole of your shoe making sure no impressions remain
